

## Eos Energy Announces Indensity™: A Breakthrough in Battery Energy Storage—Join the Launch Event Today at 8:30 a.m. ET

January 14, 2026

PITTSBURGH, Pa., Jan. 14, 2026 (GLOBE NEWSWIRE) -- [Eos Energy Enterprises, Inc. \(NASDAQ: EOSE\)](#) ("Eos" or the "Company"), an American energy company and the leading innovator in designing, sourcing, manufacturing, and providing zinc-based battery energy storage systems (BESS), today announced the launch of Eos Indensity™—and invites you to experience it first during an unveiling event happening today at 8:30 a.m. ET [Register now](#) and be part of the future of energy storage.

Eos Indensity™ is a breakthrough architecture designed to transform how energy storage scales for the real world. It's engineered with Spatial Intelligence, an innovative system design framework developed by the team at Eos that considers the built, human, and natural environments where power is needed most. Indensity is an architecture that rises to every site-specific challenge—setting new standards for density, scale, flexibility, and safety while building on Eos' proven Z3™ module and zinc-powered Znyth™ technology that continues to power the Eos Cube solution.

At the center of it all is the Eos Indensity Core™—a modular, stackable building block that unlocks density by leveraging all three dimensions of a site. By reaching upward as well as outward, Indensity adapts to virtually any footprint, making gigawatt-scale storage achievable where it wasn't before. Each Core integrates Z3 battery modules, Eos DawnOS™ advanced controls, onboard cooling, and power management in a compact, self-contained design that's easy to place, fast to connect, and built for real-world performance.

"Indensity is more than a product—it's a turning point," said Joe Mastrangelo, Chief Executive Officer of Eos. "We've taken everything we've learned over 15 years and built a system that answers the toughest questions in energy storage: How do you scale responsibly? How do you deliver flexibility without compromise? How do you make storage safe enough to sit next to the assets that power modern life? The idea of what we call Spatial Intelligence—thinking deeply about and designing for the daily needs and realities of the places our storage would go—that was our team's guiding star, and Indensity is our answer. And it's ready now."

What makes Indensity different?

- **Next-level Density:** Redefining expectations of battery storage capacity with a compact, stackable, modular design that targets 1 GWh per acre—roughly 4 times that of most other technologies.
- **Breakthrough Scale:** Self-contained, weather-ready Indensity Core units with plug-and-play electrical and communications simplify installation—even in previously unusable spaces.
- **Extraordinary Flexibility:** Supports 4-16+ hour durations, handles complex cycling with millisecond-fast response, and adapts to demanding applications like AI-driven data centers.
- **Exceptional Safety:** Non-flammable zinc chemistry, recyclable components, and advanced cybersecurity controls make Indensity safe enough for mission-critical sites.
- **Limitless Potential:** Deploy near data centers, military bases, and urban infrastructure—removing constraints and unlocking progress.

Indensity is designed for a future where electrification accelerates, AI drives unpredictable demand, and power systems face unprecedented strain—delivering storage that performs in the field, scales responsibly, and strengthens the backbone of modern economies.

Don't miss your chance to see Indensity first. Join Eos for the official unveiling today at 8:30 a.m. ET. This is your opportunity to hear directly from Eos leadership, learn about the breakthrough architecture, and understand how Indensity sets a new standard for battery energy storage. Secure your spot now to attend the event.

### About Eos Energy Enterprises

Eos is accelerating the shift to American energy independence with positively ingenious solutions that transform how the world stores power. The Company's BESS features the innovative Znyth™ technology, a proven chemistry with readily available non-precious earth components, that is the pre-eminent safe, non-flammable, secure, stable, and scalable alternative to conventional lithium-ion technology. The Company's BESS is ideal for utility-scale, microgrid, commercial, and industrial long-duration energy storage applications (i.e., 4 to 16+ hours) and provides customers with significant operational flexibility to cost effectively address current and future increased grid demand and complexity. ### Forward Looking Statements

Except for the historical information contained herein, the matters set forth in this press release are forward-looking statements within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements include, but are not limited to, statements that refer to outlook, projections, forecasts or other characterizations of future events or circumstances, including any underlying assumptions. The words "anticipate," "believe," "continue," "could," "estimate," "expect," "intends," "may," "might," "plan," "possible," "potential,"

"predict," "project," "should," "would" and similar expressions may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking. Forward-looking statements are based on our management's beliefs, as well as assumptions made by, and the information currently available to, them. Because such statements are based on expectations as to future financial and operating results and are not statements of fact, actual results may differ materially from those projected.

Factors which may cause actual results to differ materially from current expectations include, but are not limited to: changes adversely affecting the business in which we are engaged; our ability to forecast trends accurately; our ability to generate cash, service indebtedness and incur additional indebtedness; our ability to achieve the operational milestones on the delayed draw term loan; our ability to raise financing in the future; risks associated with the credit agreement with Cerberus, including risks of default, dilution of outstanding Common Stock, consequences for failure to meet milestones and contractual lockup of shares; our customers' ability to secure project financing; the amount of final tax credits available to our customers or to Eos pursuant to the Inflation Reduction Act; the timing and availability of future funding under the Department of Energy Loan Facility; our ability to continue to develop efficient manufacturing processes to scale and to forecast related costs and efficiencies accurately; fluctuations in our revenue and operating results; competition from existing or new competitors; our ability to convert firm order backlog and pipeline to revenue; risks associated with security breaches in our information technology systems; risks related to legal proceedings or claims; risks associated with evolving energy policies in the United States and other countries and the potential costs of regulatory compliance; risks associated with changes to the U.S. trade environment; our ability to maintain the listing of our shares of common stock on NASDAQ; our ability to grow our business and manage growth profitably, maintain relationships with customers and suppliers and retain our management and key employees; risks related to the adverse changes in general economic conditions, including inflationary pressures and increased interest rates; risk from supply chain disruptions and other impacts of geopolitical conflict; changes in applicable laws or regulations; the possibility that Eos may be adversely affected by other economic, business, and/or competitive factors; other factors beyond our control; risks related to adverse changes in general economic conditions; and other risks and uncertainties.

The forward-looking statements contained in this press release are also subject to additional risks, uncertainties, and factors, including those more fully described in the Company's most recent filings with the Securities and Exchange Commission, including the Company's most recent Annual Report on Form 10-K and subsequent reports on Forms 10-Q and 8-K. Further information on potential risks that could affect actual results will be included in the subsequent periodic and current reports and other filings that the Company makes with the Securities and Exchange Commission from time to time. Moreover, the Company operates in a very competitive and rapidly changing environment, and new risks and uncertainties may emerge that could have an impact on the forward-looking statements contained in this press release.

Forward-looking statements speak only as of the date they are made. Readers are cautioned not to put undue reliance on forward-looking statements, and, except as required by law, the Company assumes no obligation and does not intend to update or revise these forward-looking statements, whether as a result of new information, future events, or otherwise.
